and Results of Operations
For the third quarter and nine month ended March 31, 2019**

DIAMOND FIELDS RESOURCES INC.

Management's Discussion and Analysis

Third quarter ended March 31, 2019

(All amounts are expressed in U.S. dollars except where otherwise indicated)

INTRODUCTION

This Management's Discussion and Analysis ("MD&A") has been prepared as at May 28, 2019 and contains certain "forward-looking statements" under the Canadian securities laws. All statements, other than statements of historical fact included herein, including without limitation statements regarding potential mineralization, exploration results, plans and objectives of Diamond Fields Resources Inc. ("Diamond Fields", or "the Company"), are forward-looking statements that involve various risks, uncertainties and assumptions. The MD&A should be read in conjunction with the condensed consolidated financial statements of Diamond Fields. The third quarter and nine month financial statements ending March 31, 2019 are unaudited and have not been reviewed by the Company's external auditor.

Additional information about Diamond Fields is available on SEDAR at www.sedar.com.

Management's responsibility for financial reporting

The consolidated financial statements have been prepared by management who, when necessary, have made informed judgements and estimates of the outcome of events and transactions, with due consideration given to materiality. Management acknowledges its responsibility for the fairness, integrity and objectivity of all information in the consolidated financial statements.

As a means of executing its responsibility, management relies on the company's system of internal control. This system has been established to ensure, within reasonable limits, that the assets are safeguarded, transactions are properly recorded and are executed in accordance with management's authorization. In addition, the system ensures that the accounting records provide a solid foundation from which to prepare the consolidated financial statements.

The Board of Directors carries out its responsibility for the consolidated financial statements principally through its Audit Committee, consisting solely of non-management directors. This committee makes its recommendations to the Board of Directors. Based on those recommendations, the Board of Directors approves the consolidated financial statements.

OVERVIEW

Description of business

Diamond Fields is a British Columbia governed company listed on the TSX Venture Exchange. The Company is active in mineral exploration, and has business interests in Madagascar, Namibia and in the Red Sea (jointly managed by The Kingdom of Saudi Arabia and the Republic of Sudan).

The Company's trading symbol on the TSX Venture Exchange is DFR.

Principal Assets

Beravina (Zircon). The Company through its Madagascar-based subsidiary, Compagnie Generale des Mines de Madagascar, owns a Mining Licence (Permis d'Exploitation 8096) for the exploration and mining of the Beravina deposit that is valid until June 22, 2055. The project is located in Western Madagascar within the Melaky region, covering 625 hectares and is approximately 220km east of the port of Maintirano, near a state road. A NI 43-101 technical report filed by the Company on 29 January 2019, reported an Inferred Mineral Resource Estimate of 1.5 million tonnes grading 22.7% Zircon (ZrSiO₄).

Namibia (Diamond). Through its Namibian subsidiaries, the Company owns several offshore diamond mining licences in Namibia, including ML111 where the Company had historic diamond production (2001-2008 and 2016). The Company started an initial mining campaign, part of a six month (non-

DIAMOND FIELDS RESOURCES INC.

Management's Discussion and Analysis

Third quarter ended March 31, 2019

(All amounts are expressed in U.S. dollars except where otherwise indicated)

continuous) mining program on 10 November 2018 which was successfully concluded on 13 January 2019. The Company also owns ML138, ML139 and 70% of ML32.

Red Sea (Zinc, Copper, Manganese, Cobalt and others). The Atlantis II basin containing the Atlantis II deposit is located at the bottom of the Red Sea. The Project is currently on hold pending resolution of a dispute with DFR's joint venture partner, Manafa International Ltd., over certain contractual issues.

REVIEW OF OPERATIONS

Highlights

Increase to Stock Option Plan and grant of incentive stock options

During the current year, the Company increased its fixed, less than 10%, Stock Option Plan from 4,700,000 shares to 6,789,000 shares and granted stock options to eligible participants.

Beravina Project - Madagascar

During the previous financial year, the Company commissioned consultants SGS, HATCH and MSA Group to conduct analyses of the Beravina mineralisation, mineralogy, metallurgy and other deposit characteristics. This work continued during the year under review, and results achieved show that Zircon could be concentrated to levels of between 50% and 58% ZrO₂, using different processes, with varying levels of thorium ingrain. A NI 43-101 technical report was filed on SEDAR during the quarter reporting an Inferred Mineral Resource Estimate of 1.5 million tonnes grading 22.7% Zircon (ZrSiO₄). Following the quarter, the Company entered into a cooperation agreement (the "Cooperation Agreement") with TMH Acquisition Co. ("TMH"), a special purpose vehicle established by Denham Mining Fund LP, to advance the project. The terms of the Cooperation Agreement are stated under the "Subsequent Events" section of this MD&A.

Diamond Mining - Namibia

International Mining and Dredging Holdings (Pty) Limited ("IMDH") through its subsidiary Nutam Operations (Pty) Ltd. ("Nutam") started an initial mining campaign, as part of a six month (non-continuous) mining program, on ML 111 on 10 November 2018. The initial campaign was successfully completed on 13 January 2019, producing 47,318.41ct gross weight unpolished rough diamonds as endorsed by the Namibian Ministry of Mines and Energy. This converted into 47,298.18ct net weight after boiling and cleaning which resulted in net share of proceeds attributable to the Company of \$1,105,530. Following the quarter under review, the Company received its Environmental Clearance Certificate from the Ministry of Environment for ML32.

Other prospects

The Company continues to review and assess the suitability of additional projects.

Overall operation updates and performance

The Company posted a comprehensive profit of \$521,193 and \$182,389, respectively for the third quarter and nine month periods ending March 31, 2019 (2018: loss \$202,851 and gain \$571,404).

Board and Senior Management

The Board consists of seven directors: Norman Roderic Baker, Bertrand Boule, Francois Colette, Al Gourley (Chairman of the Board), Sybrand van der Spuy (CEO), David Reading and Philip Murphy. Jean Lindberg Charles is the CFO and Company Secretary.

DIAMOND FIELDS RESOURCES INC.

Management's Discussion and Analysis

EPS - basic (cents)	0.77	(0.43)	0.27	1.21

The condensed consolidated interim financial statements of the Company have been prepared in accordance with IAS 34 'Interim Financial Reporting' and do not include notes of the type normally included in an annual financial report and should be read in conjunction with the most recent annual financial report. The MD&A includes certain non-IFRS measures to provide meaningful information, where appropriate.

Other income amounting \$1,105,530 relates to the Company's share of net proceeds from the sale of 47,298.18 carats of diamonds mined from ML111. Mining was performed by IMDH through its Namibian subsidiary Nutam and the diamonds were sold following auction in Antwerp. Other income for last year amounting to \$1,070,000 relates to share of proceeds from bulk sampling program at its Namibian operations (\$670,000) and a gain on the disposal of a previously 100% owned subsidiary, Nickel Fields (Mauritius) Ltd (\$400,000).

During the third quarter and nine month period, the Company incurred \$300,420 and \$644,614 on exploration and evaluation expenditures respectively (2018: \$164,010 and 337,400) mainly in relation to the evaluation of new prospects and projects \$386,848, Namibian projects \$174,260 and Beravina \$83,506. General and administrative overheads for the third quarter and nine month period amounted to \$92,830 and \$245,804 respectively (2018: \$95,447 and \$227,361) made up mainly of salaries, consultancy and professional fees. Share-based compensation amounted to \$ nil and \$115,674 for the third quarter and the nine month period respectively (2018: \$ nil) following the grant of 1,837,200 share options to eligible participants at an exercise price of CAD \$0.145 per share, all accounted for during the first quarter. A loss of \$191,677 and gain of \$73,533 on fair value movement of derivative instruments were recognised during the third quarter and nine month period respectively (2018: gain of \$nil and 12,558) following a revaluation of 10,666,667 outstanding warrants which were issued on September 23, 2016 to Spirit Resources at an exercise price of CAD \$0.125, as a result of higher DFR

DIAMOND FIELDS RESOURCES INC.

Management's Discussion and Analysis

Third quarter ended March 31, 2019

(All amounts are expressed in U.S. dollars except where otherwise indicated)

stock trading price on the last day of the reporting period, partly offset by the reduction in the remaining life of the warrants.

Projects

Madagascar "Beravina" Zircon

In 2016, the Company acquired the Beravina zircon project in Madagascar. Beravina is a pegmatite-hosted, hard rock, zircon deposit located approximately 325 kilometers west-northwest of Antananarivo, the capital of Madagascar. The deposit is characterized by a small surface footprint, with the mineralised pegmatite describing a steeply dipping cone-shaped structure. On January 29, 2019, the Company filed a technical report declaring an Inferred Mineral Resource Estimate of 1.5 million tonnes grading 22.7% Zircon (ZrSiO₄) (equivalent to 15.3% ZrO₂). The NI 43-101 Technical Report is available on SEDAR and the Company's website, with the reported resource summarised below.

Category	Tonnes (Millions)	ZrO ₂ %	ZrSiO ₄ %	HfO ₂ %	ThO ₂ ppm	U ₃ O ₈ ppm	Density t/m ³
Inferred	1.5	15.3	22.7	0.3	537	46	3.1

Consultants SGS South Africa, HATCH and the MSA Group have been conducting analyses of the Beravina mineralisation, mineralogy, metallurgy and other deposit characteristics (the "2018 Work Program") in advance of an intended drill program. Results from further metallurgical and material processing tests released in October 2018 confirmed that zircon can be concentrated to levels between 50% ZrO₂ and 58% ZrO₂ with varying levels of thorium ingraind.

After the quarter under review, the Company entered into a Cooperation Agreement with TMH Acquisition Co, a special purpose vehicle established by Denham Mining Fund LP, to advance the project. Further information relating to the agreement is available on SEDAR, the Company's website and summarised under the "Subsequent Event" section, further below.

The Company incurred \$83,506 on the Beravina project for the nine month period.

Namibian Marine Concessions

The Company holds four mining licences off the coast of Namibia. The principal mining licence, ML111, held by its subsidiary, Diamond Fields Namibia (Pty) Limited ("DFN"), is valid until December 4, 2025. DFN also holds additional mid to deep water offshore concessions ML138 and ML139. The ML138 and ML139 licences are valid until November 2019 and November 2029, respectively. Namibian Diamond Company (Pty) Limited ("NDC"), a 70% owned Namibian subsidiary, holds the near shore concession ML32, which has been renewed for a period of five years during the quarter. The Environmental Clearance Certificate for ML32 was issued by the Ministry of Environment and Tourism on the 24th April 2019.

In November 2017, IMDH and Nutam presented DFR (and its subsidiary Diamond Fields Namibia) with an initial six month (non-continuous) mining program and, on 10 November 2018, IMDH/NUTAM's vessel MV Ya Toivo started mining activities. Phase 1 was completed on 13 January 2019, producing 47,318.41ct gross weight (47,298.18ct net weight after boiling and cleaning) rough diamonds. The Company's share of net proceeds amounted to \$1,105,530.

Costs amounting to \$174,260 have been incurred in respect to the Namibian operations for the nine month period ended 31 March 2019 (2018: \$172,449).

DIAMOND FIELDS RESOURCES INC.

Management's Discussion and Analysis

Third quarter ended March 31, 2019

(All amounts are expressed in U.S. dollars except where otherwise indicated)

Atlantis II, Red Sea

The Atlantis II deposit comprises a series of interlinked sub-basins predominantly infilled by a series of SEDEX (Sedimentary Exhalative) sedimentary sequences. Pursuant to an agreement reached in 2011, a 30-year mining licence issued by the Joint Red Sea Commission to Manafa International Trade Company ("Manafa") was to be transferred to a joint venture company that was to be majority owned by the Company. Diamond Fields was entitled to a 50.1% in such company, with Manafa to hold the remaining 49.9% of shares.

Diamond Fields has subsequently completed an independent resource analysis based on the original core data from the Atlantis II Deeps collated by Preussag. Development of the project has been hindered since April 2013 following a dispute with Manafa over contractual terms. The Company expects to resolve the impasse at some stage. No significant expenditures were incurred on the project during the reporting period.

SELECTED QUARTERLY FINANCIAL INFORMATION

The following table sets forth selected financial information for the eight most recently completed quarters:

<i>All amounts in US\$</i>	Mar 31 2019	Dec 31 2018	Sep 30 2018	Jun 30 2018	Mar 31 2018	Dec 31 2017	Sep 30 2017	Jun 30 2017
Other Income gains / (Loss) on sale of assets	1,110,467	5,731	6,996	(3,518)	4,826	1,070,000	-	-
Net Income / (Loss)	517,182	(330,847)	(974)	133,673	(240,711)	890,112	(187,607)	(729,160)

CAPITAL RESOURCES AND LIQUIDITY

Cash and Working Capital

At March 31, 2019, the Company had \$951,269 in working capital, including cash amounting to \$1,818,247 compared to working capital of \$653,205 and cash of \$1,425,450 as at June 30, 2018. The increase in working capital (\$298,064) is mainly attributable to the share of net proceeds (\$1,105,530) from mining, mostly offset by expenses incurred during the nine month period. The increase in cash (\$392,797) is more favourable than the increase in working capital, attributable to Value Added Tax (\$165,829) collected during the quarter under review and paid for following the quarter end, partly offset by an accumulated gain on fair value of derivatives (\$81,392), accounted under current liabilities, impacting working capital but not impacting cash.

Share Transactions

The Company had 67,895,662 outstanding shares as at June 30, 2018 and March 31, 2019, no shares were issued during the nine month period. During the previous year 20,550,646 shares were issued at a price of CAD \$0.125 per share, of which 6,472,476 were issued in respect of a private placement and 14,078,170 were issued in consideration of a debt for share transaction with Spirit Resources.

DIAMOND FIELDS RESOURCES INC.

Management's Discussion and Analysis

Third quarter ended March 31, 2019

(All amounts are expressed in U.S. dollars except where otherwise indicated)

Stock options and warrants

The Company operates a fixed, less than 10%, stock option plan and had 3,852,800 outstanding options with exercise prices varying between CAD \$0.145 and CAD \$0.50 as at 30 June 2018. During the first quarter, 490,000 options lapsed. On August 28, 2018, the Company increased its fixed, less than 10%, stock option plan to 6,789,000 options which remained less than 10% of the Company's then (and current) 67,895,662 issued and outstanding shares. The Company also granted a further 1,837,200 options at an exercise price of CAD \$0.145 to eligible participants during the first reporting quarter. As at the reporting date, the Company had a total of 5,200,000 issued and outstanding options, of which 3,841,867 had vested. All outstanding options have an exercise price of CAD \$0.145 per share. The grant of options gave rise to share based compensation of \$ 115,674, which was recognized in the Company's statement of profit or loss during the first quarter.

On September 23, 2016, the Company issued to Spirit Resources, its majority shareholder, 10,666,667 warrants exercisable at a price of CAD \$0.125 each, which are exercisable within five years from the issue date. The warrants were still outstanding as at the date of reporting, and their valuation gave rise to a gain of \$81,392, accounted for in the statement of income, as a fair value movement of derivative instruments (\$73,533) and difference on exchange (\$7,859).

CRITICAL ACCOUNTING ESTIMATES AND JUDGMENTS

The preparation of financial statements in accordance with IFRS requires management to make estimates and assumptions that affect the reported amounts of assets and liabilities and the disclosure of contingent assets and liabilities at the reporting date and the reported amounts of income and expenses during the period. Actual results could differ from those estimates.

Estimates and underlying assumptions are reviewed on an ongoing basis. Revisions to accounting estimates are recognised in the period in which the estimate is revised if the revision affects only that period or in the period of the revision and future periods if the revision affects both current and future periods.

Information about critical judgments in applying accounting policies that have the most significant risk of causing material adjustment to the carrying amounts of assets and liabilities recognized in the consolidated financial statements within the next financial year are discussed below:

Share-based Payment Transactions

The Company measures the cost of equity-settled transactions with employees and other parties by reference to the fair value of the equity instruments at the date at which they are granted. Estimating fair value for share-based payment transactions requires determining the most appropriate valuation model, which is dependent on the terms and conditions of the grant. This estimate also requires determining the most appropriate inputs to the valuation model including the expected life of the share option, volatility and dividend yield and making assumptions about them. The assumptions and models used for estimating fair value for share-based payment transactions are disclosed in Note 12 of the latest audited financial statements.

Derivative Financial Instruments

The Company has determined that its functional currency is the US dollar and has issued non-broker warrants in a currency other than its functional currency. The Company measures the cost of the derivative financial instruments by reference to the fair value of the instruments at the date at which they are granted and revalues them at each reporting date. Estimating fair value for non-broker warrant transactions requires determining the most appropriate valuation model, which is dependent on the terms and conditions of the grant. This estimate also requires determining the most appropriate inputs

DIAMOND FIELDS RESOURCES INC.

Management's Discussion and Analysis

Third quarter ended March 31, 2019

(All amounts are expressed in U.S. dollars except where otherwise indicated)

to the valuation model including the expected life of the warrant, volatility and dividend yield and making assumptions about them. The assumptions and models used for estimating fair value derivative financial instrument transactions are disclosed in Notes 13 of the latest audited financial statements.

Title to Mineral Property Interests

Although the Company has taken steps to verify title to mineral properties in which it has an interest, these procedures do not guarantee the Company's title. Such properties may be subject to prior agreements or transfers and title may be affected by undetected defects.

ADOPTION OF NEW ACCOUNTING STANDARDS & OTHER PROPOSED FUTURE ACCOUNTING CHANGES

Standards, amendments and interpretations not yet effective

The IASB or the International Financial Reporting Interpretations Committees ("IFRIC") have issued a number of new or revised standards or interpretations that will become effective for future periods and have a potential implication for the Company.

IFRS 16 Leases

IFRS 16 provides a comprehensive model for the identification of lease arrangements and their treatment in the financial statements of both lessees and lessors. It will supersede the following lease Standard and Interpretations upon its effective date:

- IAS 17 *Leases*
- IFRIC 4 *Determining whether an arrangement contains a lease*
- SIC 15 *Operating Lease – Incentives*; and
- SIC 27 *Evaluating the Substance of Transactions involving the Legal Form of a Lease*

IFRS 16 is effective for reporting periods beginning on or after January 1, 2019 with early application permitted for entities that apply IFRS 15 at or before the date of initial application of IFRS 16.

The directors of the Company do not anticipate that the application of IFRS 16 in the future will have a material impact on the amounts reported and disclosures made in the Company's financial statements. The Company has not early adopted any of these standards or interpretations.

CAPITAL MANAGEMENT AND FINANCIAL INSTRUMENT RISKS

(i) Capital Management

The Company's objective is to ensure it has sufficient capital to maintain its ongoing mining operations and safeguard its ability to continue as a going concern in order to pursue the continued development of its various mineral properties.

The Company's capital consists of shareholders' equity. The Company's policy is to fund ongoing exploration activities, as well as its administration and corporate activities, from the issuance of shares and debt instruments. The Company may acquire additional funds from capital or debt markets where advantageous circumstances arise. The Company assesses capital and debt markets on a case by case basis to minimize the cost of capital in the prevailing markets and maintain an optimal capital structure. The Company plans to raise capital or borrow funds, although there is no certainty that such financing will be available on terms acceptable to the Company. Management reviews its capital management approach on an ongoing basis and believes that this approach, given the relative size of the Company, is reasonable. No investments in asset backed commercial paper are used. There are no outside restrictions on the Company's capital.

The Company's capital management policies have not changed during the year.

(ii) Financial Instrument Risks

DIAMOND FIELDS RESOURCES INC.

Management's Discussion and Analysis

Third quarter ended March 31, 2019

(All amounts are expressed in U.S. dollars except where otherwise indicated)

The Company is exposed in varying degrees to a variety of financial instrument related risks. The type of risk exposure and the way in which such exposure is managed is provided as follows:

Market Risk

Market risk is the risk that the fair value of future cash flows of a financial instrument will fluctuate because of changes in market prices. Market prices are comprised of four types of risk: foreign currency risk, interest rate risk, equity price risk and commodity price risk.

Foreign currency risk

Foreign currency risk is the risk that a variation in exchange rates between currencies with which the Company transacts will affect the Company's operations and financial results. The Company primarily transacts business in Canada, Mauritius, Namibia, Madagascar and South Africa and purchases goods and services denominated in US dollars, Canadian dollars, Namibian dollars, Madagascar Ariary and South African Rand. As such, the Company has exposure to foreign currency exchange rate fluctuations. The Company has not entered into any agreements or purchased any instruments to hedge possible foreign currency risks.

Interest rate risk

The Company does not have any financial instruments subject to interest rate risk at the date of reporting.

Equity price risk

Equity risk is the uncertainty associated with the valuation of assets arising from changes in equity markets. The Company has no equity holdings and is therefore not exposed to this risk.

Commodity price risk

Commodity price risk is the uncertainty associated with the valuation of assets arising from changes in commodities. Though the Company is at an early exploration stage it is exposed to price risk through its Namibian operations where an initial six month (non continuous) mining program has started.

Credit risk

The Company is primarily exposed to credit risk on its cash and the risk of financial loss if counterparty to a financial instrument fails to meet its financial obligation. Credit risk exposure on cash is limited through maintaining cash with high-credit quality financial institutions and instruments.

Liquidity risk

Liquidity risk is the risk that the Company will not be able to meet its financial obligations as they become due. The Company's approach to managing liquidity is to ensure, as far as possible, that it will have sufficient liquidity to meet its liabilities when due, without incurring unacceptable losses or risking harm to the Company's reputation. The Company monitors cash flows to ensure it has sufficient available funds to meet current and foreseeable financial requirements at a reasonable cost.

RISKS

The Company's properties and operations are subject to certain risks including but not limited to government regulations related to mining, mineral prices and currency fluctuations, competition, receipts of permits and approval from government authorities, operating hazards and other risks inherent to mineral exploration, development and mining operations.

DIAMOND FIELDS RESOURCES INC.

Management's Discussion and Analysis

Third quarter ended March 31, 2019

(All amounts are expressed in U.S. dollars except where otherwise indicated)

Political Risks

The Company strives to minimize political risk by monitoring events in countries where it operates or where it considers operating, and by complying with local laws and regulations. The Company operates and conducts exploration activities in countries which have experienced civil unrest and/or civil warfare in recent years. It attempts to minimize the risks inherent in conducting operations and exploration in frontier areas by monitoring local conditions and avoiding high risk areas.

Additional financing Requirement

The Company's ability to continue its activities depends on its ability to obtain additional financing. The Company plans to raise additional financing to meet its debt repayment obligations, continue its exploration activities and maintain its exploration properties. There can be no assurance as to the success of future financing activities necessary to meet the Company's debt obligations and operating requirements.

Estimates of reserves and resources are inherently uncertain

Sea diamond deposits are alluvial deposits located on the ocean floor. These deposits are difficult to sample because of their remote nature, variable terrain and the location of diamonds in irregular gravel beds lying above and within crevices and potholes in the bedrock. As a result, there are no standard sampling tools and resource estimation practices employed for these types of deposits.

There is a degree of uncertainty attributable to the calculation of reserves, resources and corresponding grades being mined or dedicated to future production. Until reserves or resources are mined and processed, the quantity of reserves or resources and grades must be considered as estimates only. In addition, the quantity of reserves or resources may vary depending on diamond prices, operating costs and mining efficiency. Any material change in the quantity of reserves, resources or grade may affect the economic viability of the Namibian marine concessions. Mining tools currently available to the Company differ from those used for calculating indicated resources (probable reserves) in the 2000 feasibility study.

Exploration activities will not necessarily result in the discovery of commercially recoverable quantities of targeted minerals (currently diamonds, zinc, copper, gold, nickel and zircon)

Mineral exploration activities involve a high degree of risk and uncertainty. There is no assurance that continued exploration of the Company's concessions will result in any discovery of commercial quantities of diamonds, zircon and/or nickel over and above those previously identified. Even if commercial quantities of diamonds, zircon and/or nickel are discovered, economic recovery is dependent upon a number of factors, including the particular attributes of the deposit, such as terrain, size and grade, diamond prices and government regulations relating to royalties, allowable production, importing and exporting of minerals and environmental protection. Most of these factors are beyond the control of the Company.

Offshore diamond mining involves significant risks

The business of offshore diamond mining is subject to a variety of risks such as accidents, extreme marine and weather conditions, natural disasters, environmental hazards, the discharge of toxic chemicals and other hazards. Such occurrences, against which the Company cannot, or may elect not to, insure, may result in damage to or destruction of mining equipment and infrastructure, injuries and loss of life, environmental damage, delayed production, increased production costs and possible legal liability to third parties, any or all of which may have a material adverse effect on the Company's financial position. The mining and processing systems and the vessels to be used in the Namibian marine concessions are to be at sea year-round, and weather conditions will inevitably have an effect on operations. An initial mining campaign carried out on the ML 111 Namibian diamond

DIAMOND FIELDS RESOURCES INC.

Management's Discussion and Analysis

Third quarter ended March 31, 2019

(All amounts are expressed in U.S. dollars except where otherwise indicated)

mining license was successful, but some projects of this type have experienced problems during operations and cost overruns. Technical problems may affect the operations of the sea diamonds projects, which may adversely affect profitability. Moreover, the Company relies on a third party mining vessel to operate its offshore mining operations, as such, is subject to third party risks and unavailability of such third party vessel.

The offshore diamond mining technology selected by the Company may not be as efficient as expected

Geological conditions in those areas of the concession in which sampling activities were carried out contributed to a suspected under sampling bias by the sampling tool and could adversely affect the ability of the mining tool to recover all of the diamonds which are actually present on the sea floor. The extent to which this will occur cannot be quantified at this time and will only be known as mining progresses. Even if a sampling bias is confirmed, there is no assurance that any additional diamonds can be entirely recovered.

The nature of the Company's Beravina zircon deposit may present operational and environmental risks

The Beravina deposit has a NI 43-101 Inferred Mineral Resource estimate. Results from test work showed that zircon can be concentrated between 50% ZrO₂ and 58% ZrO₂ with varying levels of thorium ingrained. Whilst the Company anticipates doing further work, including evaluation of additional processing techniques to improve concentrate grade and remove deleterious elements as well as market testing of various potential products, there is no certainty that the Company will achieve product grade and a selling price that may be commercially viable. The Company has entered into a cooperation agreement for the advancement of the Beravina project, and expects further works on the project. The success of the works and future development remains subject to extractability, recovery and marketability of the product.

Certain of the Company's mining and exploration concessions may not be in good standing, there can be no assurance that circumstances will change

The Company has investigated its rights to explore and exploit its concessions and, to the best of its knowledge, those rights are in good standing. However, no assurance can be given that applicable governments will not revoke, or significantly alter the conditions of, the applicable exploration and mining authorizations and that such exploration and mining authorizations will not be challenged or impugned by third parties. Mining and prospecting licences may be revoked by the applicable government authorities for failure to perform the obligations there under. Licences must be renewed periodically. The renewal process involves a review of the licence holder's performance by government authorities.

Directors and officers of the Company may have conflicts of interest

Certain of the directors of the Company are directors or officers of, or have shareholdings in, other mining companies. If, and to the extent that, such other companies participate in business ventures in which the Company also participates, those directors may have a conflict of interest. These other mining companies may also compete with the Company for the acquisition of mineral property rights. In the event that any such conflict of interest arises, a director who has such a conflict will disclose the conflict to a meeting of the directors of the Company and will refrain from participating in any Board decisions concerning the matter giving rise to the conflict. In appropriate circumstances, the Company will establish a special committee of independent directors to review a matter in which several directors, or management, may have a conflict.

In accordance with the laws of British Columbia, the directors of the Company are required to act honestly, in good faith and in the best interests of the Company. The Company's directors and senior officers have advised the Company that they intend to bring forward to the Company in priority to others, new opportunities that become available to them for the acquisition of, or participation in,

mineral properties in the countries in which the Company is presently active for the consideration of the Company's Board of Directors. In such event, the Company will apply the procedures and mechanisms set forth above. In determining whether or not the Company will participate in a particular program and the interest therein to be acquired by it, the directors will primarily consider the potential benefits to the Company, the degree of risk to which the Company may be exposed and its financial position at that time.

Exchange controls may restrict the Company's ability to repatriate earnings

Namibia is part of the South African Rand Common Monetary Area ("CMA"). Exchange controls in the CMA require that dividends, loans, repayment of loans and payment of all invoices to parties outside the CMA by companies registered in the CMA require prior approval. The controls, as they relate to Namibia, are applied by the Bank of Namibia. There can be no assurance that the Company will obtain the requisite approvals in the future to repay loans or pay invoices to parties outside the CMA, including companies within the Company's corporate group not resident in the CMA, thus exchange controls may restrict the Company from repatriating funds and using those funds for other purposes.

Profitability may be affected by fluctuations in the market price of gem quality diamonds

Diamond production from the Company's offshore diamonds licences has historically contained a high percentage of gem quality stone. There is no assurance that prices received in the market place will be at the same level as the prices used in the financial analyses of the Company's feasibility study of the sea diamonds project. There can be no assurance that an economic recession, increased supplies, or the actions of authorities will not adversely affect the prices the Company will receive for its diamonds and its revenues from mining operations.

In Namibia, a 10% royalty is levied on rough and uncut diamonds mined and sold, exported or otherwise disposed of. The royalty is calculated on the Namibian government valuator's estimate of the market value of the stones.

Diamond prices in international markets may also be affected by concerns of diamond origin. So-called "conflict diamonds" that originate in countries involved in civil war and that are alleged to fund the activities of warring factions in these countries tend to bring the international diamond market into disrepute. Although none of the Company's production includes "conflict diamonds", any proliferation of "conflict diamonds" in international markets could have an adverse effect on demand and prices, thereby hurting the Company's profitability.

Government regulations in foreign countries may limit the Company's activities and harm its business

The concessions comprising the Company's diamond projects are located off the coast of Namibia and are subject to the laws and regulations of Namibia. Although mining in Namibia has a long history and has not been adversely impacted by unreasonable or arbitrary government action, there can be no assurance that the Company's business, operations and affairs will not be materially adversely affected by changes to, or arbitrary application of, Namibian laws and regulations or changes in the political and economic status of Namibia.

Operations carried on by the Company in respect of its diamond projects will be subject to government legislation, policies and controls relating to prospecting, development, production, importing and exporting of minerals, concession tenure, exchange controls, mining taxes, labour standards and environmental protection. There can be no assurance that such legislation, policies and controls will not have a material adverse effect on the business, operations and affairs of the Company.

(All amounts are expressed in U.S. dollars except where otherwise indicated)

Complying with environmental regulatory requirements could be costly and could adversely affect the profitability of the sea diamonds projects

All aspects of the Company's mining operations are subject to environmental regulation. Environmental legislation is evolving in a manner which will require stricter standards and enforcement, increased fines and penalties for non-compliance, more stringent environmental assessments of proposed projects and a heightened degree of responsibility for companies and their officers, directors and employees. Although the Company's environmental management plans for offshore diamond mining has been approved by the Namibian Government there is no assurance that future changes in environmental regulation will not adversely affect such projects. Environmental hazards may exist on the Company's concessions which are presently unknown to the Company and which have been caused by previous or existing owners or operators of the properties.

Failure to comply with applicable laws, regulations and permitting requirements may result in enforcement actions there under, including orders issued by regulatory or judicial authorities causing operations to cease or be curtailed, and may include corrective measures requiring capital expenditures, installation of additional equipment, or remedial actions. Parties engaged in mining operations may be required to compensate those suffering loss or damage by reason of the mining activities and may have civil or criminal fines or penalties imposed for violations of applicable laws or regulations.

Amendments to current laws, regulations and permits governing operations and activities of mining companies, or more stringent implementation thereof, could have a material adverse impact on the Company and cause increases in capital expenditures or production costs or reductions in levels of production at producing properties or require abandonment or delays in development of new mining properties.

OUTSTANDING SHARE DATA

Movement on shares and stock options have been reported under "Capital Resources and Liquidity" section of this MD&A. As at the date of reporting 67,895,662 common shares were issued and outstanding. During the previous year, a total of 20,552,646 shares were issued at a price of CAD \$0.125 per share from a private placement for 6,472,476 shares and a debt for share transaction for 14,078,170 shares with major shareholder, Spirit Resources. A balance of 3,852,800 stock options were outstanding as at 30 June 2018. During the nine month period, 490,000 stock options lapsed and, on August 28, 2018, the Company increased its fixed, less than 10%, Stock Options Plan to 6,789,000 stock options and granted a further 1,837,200 options to eligible participants. As at the date of reporting, a total of 5,200,000 stock options were outstanding (out of which 3,841,867 had vested), all with an exercise price of CAD \$0.145 per share and expiring between December 11, 2021 and August 27, 2023. A balance of 10,666,667 stock warrants with exercise price of CAD \$0.125 per share were outstanding at the beginning of the period and, as at reporting date, if not exercised prior, the warrants will expire on September 23, 2021.

RELATED PARTY TRANSACTIONS

The Company provided the following compensation to related parties for the periods ended March 31, 2019 and 2018:

	Nine month ended March 31	
	2019	2018
	\$	\$
Salaries - Fees EV Young, (previously Director and CFO)	18,000	24,000
Salaries – Fees JL Charles, CFO and Secretary	59,375	-
Exploration & Evaluation – Sybrand van der Spuy	75,000	-
Share based compensation – Directors and Officers	115,674	-
Exploration and Evaluation – Fasken Martineau LLP ¹	154,239	151,299
Exploration and Evaluation – David Reading	35,342	-

¹Mr. Al Gourley, serves as a director, and chairman of the Board of the Company, and is also the Managing Partner of Fasken Martineau LLP London, which provides advisory services to the Company.

SUBSEQUENT EVENTS

On 16th May 2019, the Company announced that it had entered into a cooperation agreement with TMH Acquisition Co., a special purpose vehicle established by Denham Mining Fund LP (“TMH”), to advance the Company’s Beravina project (the “Project”) in Madagascar (the “Cooperation Agreement”). Pursuant to the terms of the Cooperation Agreement, TMH will make an immediate payment of \$250,000 to the Company and fund the next stage of exploration and development work on Beravina (the “Work Program”), expected to cost approximately \$500,000 and to be completed within seven months from the date of entering the Cooperation Agreement (the “Evaluation Period”). TMH has the right to extend the Evaluation Period by a further three months if it has incurred expenditures of \$500,000 and made a further payment of \$250,000.

TMH will have the option (the “Option”) to buy 100% of the Project in consideration of: a net payment of \$ 2,000,000; and, a nine percent royalty from future sales, subject to certain minimum deductions. Upon exercise of the Option, TMH is required to place the Project into production by no later than 30 June 2023 (the “Project Long-Stop Date”), subject to certain extensions for events of force majeure, such as permitting delays, but no longer than 30 June 2025. Should the project not be placed into production by the Project Long-Stop Date, then TMH is required to make advance payments to the Company, as follows:

- A. \$500,000 on the Project Long-Stop Date;
- B. \$500,000 six months after the Project Long-Stop Date; and,
- C. \$500,000 on every anniversary of the Project Long-Stop Date thereafter.

If TMH should fail to make an advance royalty payment, when due, then the Company shall have the right to reacquire the Project in consideration of 50% of any advance royalty payments made by TMH.

PROPOSED TRANSACTIONS

The Company continues to review and assess projects which, if deemed suitable will be pursued by the Company. As such, management may engage in discussions which involve potential investments, financing and related activities with different parties. As at the date of this MD&A, there is no material undisclosed proposed transaction.
